### Application for Administrative Department College of Computer Science &Information Technology

#### Abstract

The current manual process for inventory management and reservations consumes a significant amount of time and energy from employees, often resulting in inaccurate reports. This software has been designed to streamline these processes, saving time and reducing the workload on employees.

#### Objectives

The objective of this software is to provide a straightforward inventory management module for faculty administrators. This module will enable them to monitor the inventory levels of equipment in each office, assess the condition of the equipment, manage the procurement and delivery of new items, and produce a comprehensive report on each office within the building. Furthermore, the software facilitates the reservation of available stages, meeting rooms, and conference halls, with real-time updates on their availability and a calendar view of all reservations with the ability to print Employee reports with the support of both Arabic and English languages for the reports as well as the app.
